

NSTC 044, Fall Protection Refresher

This course is designed to provide an overview or refresher training of the CFR 1926.500 Subpart M for fall protection. The course includes fall hazards, needs, and requirements for those who may be using fall protection during the performance of their duties. Basic requirements of NASA and OSHA fall protection standards will be discussed along with an overview of protective devices and procedures. This course is based on the OSHA Training Institute Fall Arrest Systems course. This course is intended for those working in elevated environments in the performance of their duties, and/or for those with safety oversight and inspection responsibilities for operations in elevated environments where fall protection is required. This course will primarily be presented via the NASA Videoteleconferencing system and the instructor-led version of this class will only be available if combined with another course by the same instructor, if there are enough students to merit multiple presentations, or to meet special, urgent needs. Check with the NSTC management staff for determination.

Target Audience:

- Safety, Reliability, Quality, and Maintainability Professionals
- Individuals working in elevated environments where fall protection is required.
- Those working on construction sites.

Dates:
July 19, 2006
8:30 - 11:30
(3 hours)

Location: MSFC
Building 4200, Room G13E

No CEUs available
